Passive Investments

The Fund may be affected by a general decline in the markets relating to its Underlying Index. The Fund invests in the securities included in its Underlying Index regardless of their investment merit. The fund manager does not attempt to individually select stocks or to take defensive positions in declining markets.

Performance Risk

Performance risk is the uncertainty relating to the performance of the Fund with respect to its ability to earn a return over and above Initial Investment as outlined in its investment objective. The NAV of the fund might go down.

Credit Risk

Credit Risk comprises Default Risk and Credit Spread Risk. Each can have negative impact on the value of the Shariah compliant income and money market instruments including Sukuks etc:

- **Default Risk** - The risk that the issuer of the security will not be able to pay the obligation, either on time or at all;
- **Credit Spread Risk** - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of Shariah Compliant income and including money market instruments;

Events Risk:

There may be adjustments to the performance of the Fund due to events including but not limited to, natural calamities, market disruptions, mergers, nationalization, insolvency and changes in tax law.

Equity Risk:

Investment in equity securities are subject to price risk, which is dependent on a multiple of factors, including the profitability/ performance of investee companies, technological development, which may render the processes of investee companies obsolete, Government regulations, economic and political situation within the country, region and internationally. As a result of these factors, the dividend income and the share price of equity securities may go up as well as down.

Tracking Error Risk

Tracking error is the difference between the performance of a fund and the performance of its underlying index. Tracking errors may cause the Scheme to generate returns which are not in line with the performance of the underlying index

Country or Political Risk:
