2.12 Risk Disclosure

Investors must realize that all investments in mutual funds and securities are subject to market risks. Our target return / dividend range cannot be guaranteed and it should be clearly understood that the portfolio of Allocation Plans is subject to market price fluctuations and other risks inherent in all such investments. The risks emanate from various factors that include, but are not limited to:

- 2.12.1 Equity Risk** - Companies issue equities, or stocks, to help finance their operations and future growth. The Company's performance outlook, market activity and the larger economic picture influence the price of a stock. Usually when the economy is expanding, the outlook for many companies is good and the stock prices may rise and vice versa.
- 2.12.2 Interest Rate Risk** - A rise or decline in interest rates during the investment term may result in a change in return provided to the investors
- 2.12.3 Government Regulation Risk** - Government policies or regulations are more prevalent in some securities and financial instruments than in others. Funds that invest in such securities may be affected due to change in these regulations or policies, which directly or indirectly affect the structure of the security and/or in extreme cases a governmental or court order could restrain payment of capital, principal or income.
- 2.12.4 Country or Political Risk** - This is the uncertainty of returns caused by the possibility of a major change in the political or economic environment of the country such as break down of law and order, war, natural disasters, etc. and any governmental actions,

legislative changes or court orders restraining payment of principal or income

2.12.5 Credit Risk - Credit Risk comprises Default Risk and Credit Spread Risk. Each can have negative impact on the value of the income and money market instruments including Sukuks etc.:

- Default Risk - The risk that the issuer of the security will not be able to pay the obligation, either on time or at all;
- Credit Spread Risk - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income and including money market instruments;

2.12.6 Price Risk - The price risk is defined as when the value of the Fund, due to its holdings in such securities rises and falls as a result of change in interest rates.

2.12.7 Liquidity Risk – Liquidity risk is the possibility of deterioration in the price of a security in the Fund when it is offered for sale in the secondary market.

2.12.8 Settlement Risk – At times, the Fund may encounter settlement risk in purchasing / investing and maturing / selling its investments which may affect the Fund's performance etc.

2.12.9 Reinvestment Rate Risk –In a declining interest/ markup rate economic environment, there is a risk that maturing securities or coupon payments will be reinvested at lower rates, which shall reduce the return of the Fund compared to return earned in the preceding quarters.

2.12.10 Sovereign Risk - Payment of bonds/ notes may be effected by the economic and political events in the country of the relevant issuer. The occurrence of a sovereign risk event could result in the loss of all or a portion of the principal invested, as a result of any economic or political circumstance

2.12.11 Events Risk - There may be adjustments to the performance of the Fund due to events including but not limited to, natural calamities, market disruptions, mergers, nationalization, insolvency and changes in tax law.

2.12.12 Redemption Risk - There may be special circumstances in which the redemption of Units may be suspended or the redemption

payment may not occur within six working days of receiving a request for redemption from the investor.

2.12.13 Distribution Risk - Dividend distribution may also be liable to tax because the distributions are made out of the profits earned by fund and not out of the profits earned by each unit holder. Unit holders who invest in a fund before distribution of dividends may be liable to pay tax even though they may not have earned any gain on their investment as return of capital to investors upon distribution is also taxable.

2.12.14 Shariah non-compliance Risk: The risk associated with employing funds in investments that are not consistent with the Shariah as defined in this offering document.

2.12.15 Scheme Specific Risk(s) – The Scheme is subject to the following risks:

- (i) The performance of the Fund may be affected by changes in risk associated with trading volumes, liquidity and settlement systems in equity and debt markets.
- (ii) MSAF-II is a Shariah Compliant Open end Mutual Fund and, Unit Holders are not being offered any guaranteed returns.

2.12.16 Risks Specific to MCPP-IV – The Plan (MCPP-IV) is subject to the following risks:

- (i) Capital preservation will not be valid if Units of the allocation plan are redeemed before its Initial Maturity
- (ii) There exists the risk that in case of a Bond Event there is no risk free CIS available for the allocation plan to invest in that offers the same yield as required for capital preservation at maturity.
- (iii) The performance of the allocation plan may be affected by changes in risk associated with trading volumes, liquidity and settlement systems in equity and debt markets.
- (iv) Unit Holders are not being offered any guaranteed returns.
- (v) The CPPI Methodology shall be used for capital preservation. In the event the methodology does not accurately evaluate and determine a suitable asset allocation pattern or the structure of portfolio, this may

impact the ability of the allocation plan to provide capital preservation upon its Initial Maturity.

- (vi) The allocation plan, in its endeavor to seek capital preservation, may allocate the entire portfolio to underlying investments in the sovereign Income or Money Market Components and Units of the allocation plan may remain invested in such investments for the entire/remaining tenure of the allocation plan without any participation in the equity component.
- (vii) At times of high volatility in the equity markets or any other circumstances, it may not be possible to carry out the portfolio rebalancing. In such a case, the reallocation may take place on the next business day or on a business day as deemed appropriate by the Management Company. Such circumstances may affect the allocation plan's ability to seek capital preservation.
- (viii) This risk pertains to the Gap event where the Portfolio Value falls below the Present Value (bond floor) of the capital preservation amount required at maturity.
- (ix) As the allocation of portfolio changes from Equity to full sovereign Income or Money Market Components consequent to steep fall in equity markets, there may be no participation in subsequent upward movement in the equity component while the allocation plan remains invested entirely in the sovereign Income/Money Market component.
- (x) If the allocation plan for any reasons as determined by the Management Company is terminated, the NAV of the allocation plan will be subject to fluctuations in its asset value. The Net Asset Value, in this case, may be lower or higher than the Initial Investment Value. The Management Company will refund investors their investment in the allocation plan based on the NAV per Unit after deducting bank and administrative charges (if any). Capital preservation in this case might not be valid.
- (xi) There may be times when a portion of the investment portfolio of the allocation plan is not compliant either with the investment policy or the minimum investment criteria of the assigned 'category'. This non-compliance may be due to various reasons including, adverse market conditions, liquidity constraints or investment – specific issues.
